

Nader Abdelshahid

Software Engineer | Java and Spring Boot | Distributed Payments and Backend Systems

San Diego, CA | (619) 953-7021 | NNAbelshahid@gmail.com | linkedin.com/in/nnabdelshahid

PROFESSIONAL SUMMARY

Software Engineer with 5+ years of software development experience, including 4+ years building Java/Spring Boot backend services for FedNow and TCH RTP real-time payments. Delivers REST APIs, ISO 20022 processing, Kafka event mappings, MongoDB persistence, CI/CD, and security remediation in a regulated financial environment. Built reusable automation that reduced recurring API and database validation time by 67%, from ~30 minutes to ~10 minutes.

CORE TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring MVC, REST APIs, microservices, Kafka, distributed systems

Payments and Data: FedNow, TCH RTP v3.0, ISO 20022, MongoDB, Oracle/SQL

Testing and Delivery: JUnit, Mockito, Postman/Newman, Jenkins, SonarQube, Black Duck, Checkmarx, Gradle, Git

Additional: JavaScript, React, Node.js, Ruby on Rails

PROFESSIONAL EXPERIENCE

Wells Fargo | Software Engineer

Aug 2022 - Present | Remote

- Built reusable Postman/Newman and MongoDB automation that cut recurring API/database validation time by **67%**, from ~30 minutes to ~10 minutes, and standardized review evidence.
- Develop and maintain Java/Spring Boot backend services and REST APIs for distributed FedNow and TCH RTP v3.0 payments, resolving defects across credit transfers, returns, request-for-payment (RFP), and administrative-message workflows.
- Delivered ISO 20022 updates for pacs.008, pacs.002, pacs.004, camt.029, camt.035, pain.014, and admi.002, integrating Kafka event mappings, MongoDB persistence, and network-specific processing rules.
- Expanded JUnit coverage across payment mappers, controllers, exception handlers, Kafka publishers, and FedNow/TCH processors to strengthen regression testing for payment-service changes.
- Remediated security and software composition analysis findings using Black Duck and Checkmarx scan results across credit-transfer, administrative-message, and return-of-funds services.
- Validated Jenkins/SonarQube CI/CD quality gates and service changes in DEV, SIT, and UAT; collaborated with engineering, risk, compliance, network, and platform teams on issue resolution and controlled releases.

Freelance Software Developer | Self-Employed | 2019 - Present

- Develop full-stack web projects using JavaScript, React, Ruby on Rails, REST APIs, and database-backed applications.

DateSpot, Victorise & Notch8 | Software Engineer / Consultant | 2020

- Developed and refactored web and mobile applications using React, React Native, AngularJS, Ionic, and Ruby on Rails; contributed to testing, debugging, documentation, and collaborative development workflows.

SELECTED PROJECT

API and Database Automation Workbench — Independent Personal Project

- Built a modular developer workbench with a Spring Boot backend and React/Vite interface to orchestrate runtime checks, Postman/Newman API execution, MongoDB validation, and JUnit runs.
- Integrated CI/CD quality checks, redacted runtime logs, and evidence packaging into reusable workflows to make execution repeatable and engineering review traceable.

EDUCATION, TRAINING, CERTIFICATIONS AND AWARDS

LEARN Academy: Full Stack Web Development, 480+ hours | San Diego, CA

Rochester Institute of Technology: B.S. Biology, 2014; A.A.S. Laboratory Science Technology, 2012

Certifications: MongoDB Associate Developer; MongoDB Certified Associate Atlas Administrator | Aug 2026

Awards: Wells Fargo Team Spotlight Awards, 2024 and 2025
